

Young architects

Aoife and Darcy

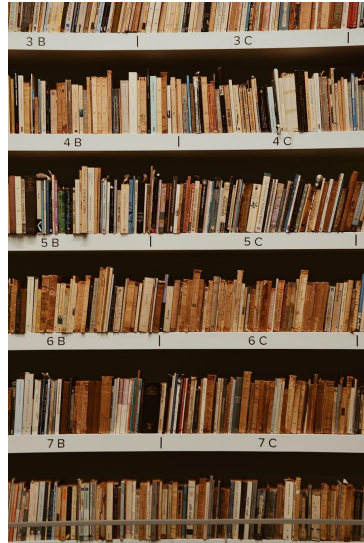

Eco and Arts school Project One

We are aiming for this shape for our model. But are having a different size of course!!! Also, we made this with paper, tape and more!

Planning

We planned on A3 sheets of paper and spent a long time thinking about how it could be eco friendly. And we did some planning on scrap pieces of paper from home. We also sometimes spend our break times to talk about our ideas.

Teamwork

If it weren't for teamwork we wouldn't have our model or our plans as we are both needed for our final product.

Was it successful?

Yes it was we finished it and made blue flower solar panels and swings to go with it, it was very fun and we both really enjoyed it!

Park Project Two

We are now starting our second project in young architects which is a park made with rope, wooden sticks, hot glue, popsicle sticks and more. We are planning to have swings, a slide and possibly a roundabout.

Planning

We are going to plan it on A3 paper like we did before and hopefully we can maybe plan it on SketchUp as well this time we are enjoying the idea of it so far and we are both hoping it will end up being successful.

Again, teamwork is KEY!

Teamwork is also going to be EXTREMELY important for this project!!!!
